## Swiss Tower Ecology

An exploration of Switzerland's complex relationship with the practice and culture of highrise.

Through visits of built as well as unbuilt case studies, we'll investigate together with real-time players the relations between economy, politics and topography, which eventually form the conditions leading to the tower typology as an architectural strategy.

Ultimately, the trip aims at understanding the prospective potential of a Swiss Tower Ecology for future development of architectural intelligence and innovation.

Die Femme de Vals Morphosis 2015

Switzerland, different locations March 19-23, 2018 Category B, max. 21 students Highly recommended for the students enrolled in the SS18 design studio "ETHighrise?"
